

FOR IMMEDIATE RELEASE

Printware to Introduce New iJetColor 1275 Pro and iJetColor 1175 Pro + PXG at Printing United 2026

New iJetColor solutions expand Printware's portfolio of high-performance inkjet systems for envelopes, commercial print, and packaging applications.

ST. PAUL, MINNESOTA – September 9, 2026 – Printware is proud to announce the upcoming introduction of two new additions to its iJetColor™ portfolio—the **iJetColor 1275 Pro** and **iJetColor 1175 Pro + PXG**—at **Printing United 2026**, taking place September 23–25 at the Las Vegas Convention Center.

The new systems represent the next generation of Printware's commitment to helping commercial printers, direct mail providers, and packaging manufacturers **Do More with Inkjet** by providing production-ready solutions designed to expand application capabilities, improve productivity, and create new revenue opportunities.

The **iJetColor 1175 Pro + PXG** builds upon the proven success of the iJetColor 1175 Pro platform, combining high-speed envelope production with expanded short-run packaging capabilities. The integrated PXG Feeding System enables printers to move beyond envelopes and print a wide range of packaging applications including; paper bags, small corrugated, folding cartons, and other compatible substrates.

With more than **1000 successful installations worldwide**, the iJetColor 1175 platform has established itself as a dependable production solution for high-speed envelope printing. The new 1175 Pro + PXG expands that proven platform with greater application flexibility, allowing print providers to diversify their offerings and capture additional revenue without investing in multiple production platforms.

"We're excited to introduce the next generation of iJetColor technology to the printing industry at Printing United," said **Bill Frederick, Vice President of Sales at Printware**. "Customers are looking for ways to expand their capabilities and create new revenue streams. The iJetColor 1175 Pro + PXG gives

printers the opportunity to add profitable packaging applications to a proven envelope production platform, while the new iJetColor 1275 Pro further expands the iJetColor portfolio.”

Also making its debut at Printing United 2026 is the **iJetColor 1275 Pro**, Printware’s newest high-speed production inkjet solution designed for commercial printers requiring offset-level production volumes with the flexibility and economics of digital inkjet. A first in its category – a digital inkjet Jet press – it sets the standard for high volume print, mail and print manufacturing applications requiring a single operator generating great productivity in an affordable digital footprint.

Powered by **HP’s next-generation 108mm TIJ 4.0 printhead technology**, the iJetColor 1275 Pro features a four-color CMYK print bar engineered to deliver high-precision, full-color envelope printing at production speeds of up to **30,000 #10 envelopes per hour**. This makes the 1275 Pro the fastest press in the iJetColor portfolio and positions it as a powerful alternative for high-volume envelope production.

The 1275 Pro is built specifically for demanding production environments, combining high-speed inkjet technology with a robust, reliable feeding and transport system. Its **rotary vacuum pick-up feeder holds up to 1,000 envelopes**, while roller-based alignment provides consistent and reliable feeding throughout production. The system is designed for single-operator production, helping print providers maximize throughput while minimizing operator intervention.

Beyond speed, the iJetColor 1275 Pro is designed around the economics of high-volume envelope production. Its low-cost, pigment-based ink is engineered for offset-volume applications while providing durable, water-, fade- and scratch-resistant output. The system also incorporates color-managed RIP technology and PMS color matching capabilities to provide consistent, repeatable color across production runs.

Visit Printware at Booth N5713 during Printing United 2026 to see the new iJetColor 1275 Pro and iJetColor 1175 Pro + PXG. Attendees can also learn about special show pricing and schedule a demonstration with the Printware team.

For more information about the iJetColor 1275 Pro, iJetColor 1175 Pro + PXG, or to schedule a demonstration, visit www.ijetcolor.com, call **800-456-1400**, or email sales@ijetcolor.com.

About Printware

Printware designs, engineers, and markets the iJetColor™ family of high-performance inkjet printing systems, including the iJetColor 1275 Pro, iJetColor 1175 Pro + PXG, iJetColor 1175C, and iJetColor 1175. Powered by HP Thermal Inkjet technology, Printware's production printing solutions are engineered to deliver industry-leading print quality, productivity, and profitability for commercial printers, direct mail providers, and packaging manufacturers. Printware, LLC is a member of Peninsula Capital and Pillsman Partners.
