

FOR IMMEDIATE RELEASE

Printware releases new inkjet press model, iJetColor 1175 Pro+PXG™, incorporating packaging to its envelope press.

The industry's best-selling inkjet industrial High-Speed Envelope Press adds versatility of Packaging printing.

ST. PAUL, MINNESOTA – July 20, 2026 – Printware is proud to announce the launch of the **iJetColor 1175 Pro + PXG™**, the next evolution of the world's best-selling high-speed envelope and short-run packaging press. Building upon the proven success of the iJetColor 1175 Pro platform, first introduced in 2020, the new 1175 Pro + PXG combines industry-leading envelope production with the flexibility to print and personalize a wide range of packaging applications, all from a single production system. The new model replaces the previous 1175 Pro model and will begin commercial shipments in July 2026.

With 500+ successful installations worldwide, the **iJetColor 1175 Pro + PXG** continues Printware's commitment to delivering dependable, production-ready inkjet solutions that maximize profitability while providing unmatched application flexibility. ***"Customers are asking us how they can Do More with Inkjet, and the Pro + PXG certainly fits that bill"*** states Bill Frederick, Vice President of Sales at Printware. ***"The ability to add profitable short-run packaging capabilities to a rugged, proven envelope solution with minimal investment, enables print operators to realize new revenue streams while utilizing an existing transport system."***

Designed specifically for commercial print providers looking to expand their capabilities, the **iJetColor 1175 Pro + PXG** delivers exceptional print quality, productivity, and profitability through its rugged industrial design, high-speed performance, and ultra-reliable vacuum feeding and alignment systems to handle every size of envelopes from coin to oversized padded envelopes, with the new PXG feeding system including the ability to run corrugated flats, boxes, paper bags, and other packaging types with two automated feeding systems as a combined unit priced under \$90,000 USD.

"We didn't design the PXG to be a one-size-fits-all feeder but rather designed for the substrate" said Duane Smith, Director of Manufacturing and Services at Printware. ***"Every critical adjustment point is accessible, allowing operators to dial-in performance for virtually any compatible substrate. It's a rugged, production-built design that has already proven itself in the field, giving customers a dependable platform they can grow more profitability with automation in packaging materials. "***

Powered by **HP Fixed-Imager TIJ 4.0 Technology**, the system produces vibrant, full-color output using durable pigment-based inks that are fade-, scratch-, and water-resistant while delivering some of the industry's lowest operating costs and longest-lasting printhead life.

The addition of the integrated **PXG Feeding System (Powered by Straight Shooter)** dramatically expands production capabilities beyond envelopes, allowing printers to produce personalized paper bags, small corrugate, folding cartons, and other packaging substrates with quick changeovers and exceptional registration. This added versatility enables print providers to diversify their offerings, increase equipment utilization, and capture new revenue opportunities without investing in multiple production platforms.

With over 500+ successful installations worldwide, the **iJetColor 1175 Pro + PXG** continues Printware's commitment to delivering dependable, production-ready inkjet solutions that maximize profitability while providing unmatched application flexibility with easy to setup with its new modular design.
